Challenge Brief

Template for challenge partners · Since AI Hackathon 2026 · 6–8 Nov 2026, Turku

This template helps you define a clear, buildable challenge for the hackathon. Fill in each section below — the more concrete the problem and the evaluation criteria, the better the prototypes you receive. You can return it to us as is, and we are happy to help shape it into a ready event challenge.

Questions about the template? Riku Lauttia · riku.lauttia@sinceai.fi · +358 40 938 8820

Challenge partner (company)

Bayer

01 Challenge Title

A short, memorable name for the challenge. Example: “Automated support ticket routing.”

Build Less, Build Better: AI for Governed Analytics

02 Problem Statement

What business or technical problem should be solved? Describe the context, why it matters, and the main pain points.

Enterprise self-service BI creates speed, but also dashboard sprawl, duplicate logic, unclear ownership and technical debt.
Bayer's Tableau-to-Power BI migration has highlighted this challenge. AI agents can accelerate analytics creation even further.
Build a prototype that helps organizations create, reuse, maintain or retire analytics products intelligently while preserving governance and business value.

03 Guiding Question

One question that focuses the challenge. Example: “How might we use AI to predict equipment failures before they happen?”

How might AI agents help turn business questions into fewer, better, maintainable and governed analytics products -

without multiplying dashboards, inconsistent KPIs and technical debt?

04 Recommended AI Approaches *Optional*

Any relevant technologies, models or methods — for example NLP for text analysis, classification, knowledge graphs, agents, or RAG.

Agentic workflows; LLM/RAG over BI metadata; semantic/KPI mapping; duplicate detection; usage/lifecycle scoring;

governance checks; human-in-the-loop approval; and recommendations to reuse, consolidate or retire analytics assets.

Focus on a working end-to-end prototype rather than model complexity.

05 Dataset or API Provided *If any*

Describe any data or resources you provide: format, a link if ready, and sample size. If none, state what builders should expect.

> At Since AI, challenges can be built with synthetic, anonymized or public data — no personal data is required.

No proprietary Bayer data is required. Use synthetic, anonymized or public data.

A mock BI estate may include dashboard/workbook metadata, owners, KPIs, usage, refresh history, dependencies and lifecycle status.

Teams may generate their own synthetic data and document assumptions.

Since AI provides a synthetic builder data pack for this challenge: Bayer_Pharmaceuticals_SinceAI_2026_FINAL_Builder_Data_Pack.xlsx (mock BI estate; no Bayer data).

06 Evaluation Criteria

How should solutions be judged? What matters most — for example accuracy, scalability, usability, or business impact?

30% problem fit & business value; 25% governance & maintainability; 20% technical quality and meaningful AI use;

15% usability for business and IT; 10% scalability and demo quality.

Strong solutions reduce analytics sprawl while preserving ownership, KPI consistency, human oversight and lifecycle control.

07 Submission Format

What deliverables do you expect? For example a demo video, pitch slides, a code repository, or documentation.

Working prototype with at least one end-to-end workflow; short pitch/demo; source-code repository;

brief README/architecture note covering data assumptions, AI approach, governance controls and enterprise-BI integration.

The submission should demonstrate a working concept, not only slides.

08 Point of Contact

Name, email and preferred contact method for questions during the hackathon.

Panu Aho - panu.aho@bayer.com - Primary Bayer challenge contact (email / onsite Q&A).
